

HARVEST NATION

INDOOR AEROPONIC FARM REGIONAL FOOD SECURITY SOLUTION

**CLEAN FARMING AND MAJOR CHANGE
FOR GREEN, EQUITABLE
COMMUNITY FOOD SYSTEMS**

CONTROLLED GROWING ENVIRONMENT

Harvest Nation has integrated optimal growing specs with software to automate a clean, safe, controlled environment for its crops. This guarantees the most efficient use of water, nutrients, and light for its multi-level production of fruits and vegetables.

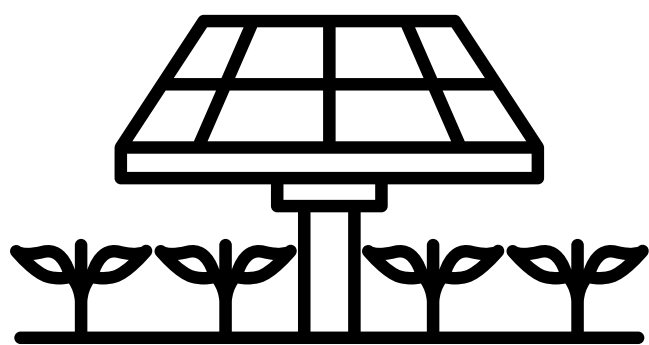

FULL SPECTRUM LED GROW LIGHTS

The technological advancement of a full-spectrum LED grow light has made indoor plant production financially viable and environmentally sustainable for its major reduction in energy inputs needed to grow indoors.

USES 90% LESS WATER, SPACE, AND NUTRIENTS

Conventional farming pollutes local waters with pesticides and strips large tracts of land of nutrient content needed for future food production. Harvest Nation's system has a reverse osmosis filter to reuse water to produce 50% faster yields in 90% less space.

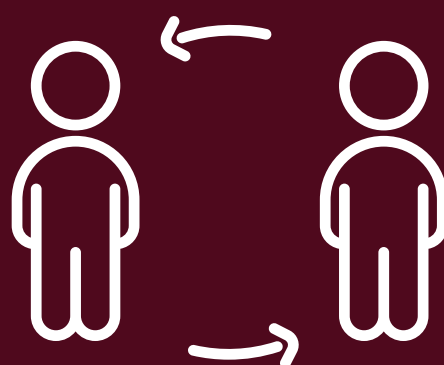

GOING NET ZERO WITH SOLAR POWER

Harvest Nation has received proposals from Litty Solar (MN) and BoxPower (CA) for off-grid solar panels with battery storage units to pair with its first farm.

FOOD SOLUTION FOR OUR COMMUNITIES

The local farm model means local accountability to the people we serve. Harvest Nation is aligned with the Food Sovereignty Movement with emphasis on real food for real people, with real responsibility for the environment.
